*Allowable Subject Matter*

The following is an examiner's statement of reasons for allowance:

Applicants' claimed invention is generally directed toward a networked product selection system. In particular, Applicants' claimed invention is directed toward a master database of products which contains information about the products, connected to a separate projects database that contains a data structure of projects for which products are suitable with at least one of recommended product classes or attribute combinations. For example, independent claims 1 and 14, especially as amended, recite, "a master database of products which contains information about the products ... a projects database containing a data structure of projects for which products are suitable with at least one of recommended product classes or attribute combinations." The prior art fails to teach all of the limitations of the independent claims. These differences of maintaining the relationships between projects and product classes or attributes allows the information to be maintained independently of the information about specific products, so that the information about specific products can be updated without need to specify projects for each new product.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
